Summary

I am a Data Science student at GIKI who prefers building products over just writing code. My focus is on making data useful, taking raw, unstructured ideas and turning them into working applications with clean user interfaces. I tend to do my best work under a deadline. I've spent a lot of my time at university competing in hackathons, learning how to prototype rapidly, iterate through broken code, and ship an actual product before the clock runs out. Beyond software, I handle marketing and design for student tech communities on campus. This means I spend as much time thinking about user experience, adoption, and clear communication as I do thinking about data architecture. Recent Proof of Execution: | () | | @ Community Roles: () & () () & (&) , , ' : I am actively looking for hands-on software projects, research opportunities, and product-focused data roles where I can jump into the deep end, design a clean system, and ship it. If you are a , , , let's connect or email me directly at saadianigah@gmail.com. Anyone who wants to collaborate on projects, research, or hackathons, feel free to drop me a message!
